

Duration	3 Days
Delivery	Classroom and Simulator
Audience	Derrickman, Floorman, Roustabout and Drilling Engineers with 1-3 years of operations experience and personnel who will be involved in the design, planning, and management of drilling operations.
Summary	<p>The course is designed to provide an introductory level fundamental knowledge of drilling operations and will allow participants the opportunity to learn and develop their understanding of subjects like: Geology, Well Design, Rig Types, Drilling Team Roles and Responsibilities, Introduction to Well Construction, Rig Components, Drill String Components, Tubular Handling Equipment, Drilling Fluids, the basics of Tripping and Drilling Operations, Formation Evaluation and various problems encountered during normal drilling and tripping operations.</p> <p>The course combines practical hands on training utilizing the drilling and well control simulators as well theoretical training sessions through lecture and classroom discussions following a detailed and well-structured lesson plan.</p> <p>The practical simulator sessions will include demonstrations of equipment operations, pipe-handling, drilling and tripping operations sequences and will provide the Participants with the opportunity to observe in real time the parameters and surface indications displayed on the drillers console for ever changing down hole conditions.</p>
Objectives	<p>The objective of the Drilling Practices 1 course is to enable all participants to develop their awareness and gain a thorough understanding of the rig systems, technology and terminology behind the drilling process.</p> <p>The practical simulator training sessions are intended to allow participants to improve their knowledge of the processes and procedures utilized in drilling a well in optimum conditions in order to minimize downtime and to ensure safe and efficient day to day operation while maintaining compliance with industry policies, procedures and agreed safe operational practices.</p>
