

Duration	5 Days
Delivery	Combination of classroom and practical hands on training utilizing the conventional and advanced drilling and well control simulators.
Audience	Rig Managers, Senior Toolpusher, Tour Pusher, Driller, Assistant Driller and Drilling Engineers that will be involved in overall well design, planning and drilling execution of a well.
Summary	<p>The course is designed to provide the audience with in-depth knowledge, skills and understanding of the Well Control techniques applied for Surface BOP Stack installations at Driller and Supervisory levels and in accordance with IADC WellSharp standards.</p> <p>Throughout the course we combine practical hands on training utilizing the drilling and well control simulators combined with classroom lecture and workshop discussions following a well-structured lesson plan that will enhance candidate's knowledge and skills retention.</p> <p>The practical simulator sessions will include operating the simulators on drilling operations with emphasis on procedures for drilling operations startup, communication, well monitoring procedures and kick identification, the operational procedures for shutting in the well and well kill operations as per industry practices and procedures.</p> <p>With emphasis on QHS&E, the course will cover the well control topics following common industry policies and operational procedures based on IADC WellSharp standard.</p> <p>On the days 3 and 4 the candidates will undergo a practical simulator assessment and on the last day of the course the candidates will undergo an online written assessment which will be administered by IADC and invigilated by an independent approved proctor.</p>
Objectives	To understand the principles and procedures and well control equipment used in well control operations on Surface BOP Stacks as per the IADC WellSharp Well Control Standard and to enable the candidates to manage and control any potential well control situation effectively and efficiently.
