

Duration	5 Days
Delivery	Combination of classroom and practical hands on training utilizing the conventional and advanced drilling and well control simulators.
Audience	Rig Managers, Senior Toolpusher, Tour Pusher, Driller, Assistant Driller and Drilling Engineers that will be involved in overall well design, planning and drilling execution of a well.
Summary	<p>The course is designed to provide the audience with in-depth knowledge, skills and understanding of the Well Control Techniques applied for Surface BOP Stack installations at Driller and Supervisory levels in accordance with IWCF Well Control standards.</p> <p>Throughout the course we combine practical hands on training utilizing the drilling and well control simulators combined with classroom lecture and workshop discussions following a well-structured lesson plan that will enhance candidate's knowledge and skills retention.</p> <p>The practical simulator sessions will include operating the simulators on drilling operations with emphasis on procedures for drilling operations startup, communication, well monitoring procedures and kick identification, the operational procedures for shutting in the well and well kill operations as per IWCF and industry practices and procedures.</p> <p>On the day 3 and 4 the candidates will undergo the IWCF practical assessment exam and on the last day of the course the candidates will undergo the written assessment which will be administered by IWCF and invigilated by an independent IWCF approved proctor.</p>
Objectives	To understand the principles and procedures and well control equipment used in well control operations on Surface Stack BOP as per the IWCF Well Control Standard and enable the candidates to effectively manage a potential well control event utilizing the commonly used dynamic well kill methods.
