

Duration	3 Days
Delivery	Classroom and Simulator
Audience	Assistant Driller, Derrickman, Floorman. Would also benefit entry level Drilling Engineers with little or no operations experience and personnel who will be involved the design, planning, and management of drilling operations.
Summary	<p>The course consists of classroom tuition and practical exercises utilizing drilling and well control simulators with a ratio of 60% classroom theory and testing, and 40% of the course time is practical sessions on the simulators, covering demonstration practice.</p> <p>The Stuck Pipe Awareness course aim is to provide Participants with basic knowledge, experience and understanding of the causes of stuck pipe and the situations and preventive measures that can be applied to reduce or eliminate stuck pipe events in order to improve overall rig operational performance standards.</p> <p>The practical simulator sessions will include demonstrations of surface equipment operation, drilling and tripping operational sequences and will provide the Participants with the opportunity to observe the specific stuck pipe mechanisms through surface gauges indications of a problem arising and operator first response.</p> <p>With emphasis on QHS&amp;E, the course will cover the Stuck Pipe Prevention topics (sticking mechanisms, problem identification, potential problem mitigation, solution application and problem solving), following industry best practices and procedures.</p>
Objectives	The objective of the Stuck Pipe Prevention – Awareness Level course is to provide participants with the underpinning knowledge and an understanding of how and why Stuck Pipe situations occur during various operations performed during drilling a well from spud to completion.
